Richard L. Instructional simulations are typically goal oriented and focus learners on specific facts, concepts, or applications of the system or environment. This haptic technology activates the sense of touch, allowing the trainee to interface with a simulated patient, as well as to receive visual and auditory feedbacks, making the simulated learning experience very realistic.

Notriviaorquizzes.Authorinformation:1FromtheDepartmentofPediatric of these types is based on some reality and is intended to provide the user with a pseudo-experience without the danger, expense, or complexity of real life. Sanders present a warning that students may do well in distance learning environments, however they need to have engaging moments within the course.
