The group is unusual in finding planets by a number of different complementary methods and is particularly active in the systematic discovery of the coolest stars including most of the coolest known examples. Conventional methods will improve contrast by up to thirty times. A possible way out of this scenario involves the retention of water in minerals called chondrites.

The point to the upper right is an 11 Jupiter mass planet located over times the Earth-Sun distance. Every chemical compound absorbs a unique set of wavelengths of light. Planetsthataretoosmallortoolargecannotbedetected.By regularly looking at the spectrum of a star – and so, measure its velocity – one can see if it moves periodically due to the influence of a companion.
